

ECOSCAPES

Hardware and Tools

Expand your installation options for EcoScapes PET Panels

SUSPENSION HARDWARE

Cloud Hardware Kit

The EcoScapes Cloud Hardware Kit provides all the necessary hardware required to suspend any EcoScapes Wall Panel* as a cloud, from most types of ceiling. The heavy-duty aircraft grade cables offer a secure hang at the height of your choice, while the rest of the hardware is hard-wearing and unobtrusive.

Benefits

- Easy to install without special equipment
- Allows a wider range of shapes and colours to be used as clouds.
- Provides a reliable and secure hang

E001-1000-00
12pcs per kit

*EcoScapes Clouds already include this hardware in the box.

T-Bar Twist-in Clip

For installs in spaces with drop ceilings, the T-Bar Twist-in Clip may be a better option than drilling. These handy clips snap onto the rails of M6 suspended ceilings, for a completely removable, no-impact acoustic installation. Great for rented office spaces, where you don't want to leave a mark. The clips are compatible with both the EcoScapes Cloud and Baffle hardware kits* - they simply screw in.

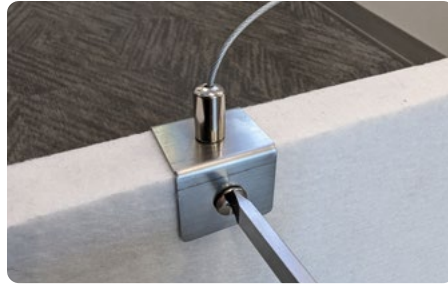

Benefits

- Easily suspend clouds and baffles from drop ceilings
- Removable and non-destructive

*This product is also compatible with Broadway Beams

E001-0004-00
12pcs per kit

Baffle Hardware Kit

E001-0003-00
8pcs per kit

For spaces with lower ceilings, baffles might be a more appropriate option. The EcoScapes Baffle Hardware Kit, includes all the necessary hardware to suspend any EcoScapes Wall Panel or Cloud vertically as a baffle. The heavy-duty aircraft grade cables offer a secure hang at the height of your choice, while the rest of the hardware is hard-wearing and unobtrusive.

Benefits

- Easy to install (*EcoScapes Hole Punch Tool recommended*)
- Allows any EcoScapes panel to be used as a baffle
- Provides a reliable and secure hang

EcoScapes Hole Punch Tool

E001-0002-00

Standard drill bits tend to get clogged when drilling into PET, so a specialized bit such as the EcoScapes Hole Punch Tool (*sold separately*) is recommend.

Benefits

- Speeds up your workflow when installing the baffle kit
- Leaves a clean hole for attaching hardware

TOOLS

J-Roller

E001-0001-00

Primacoustic recommends using construction adhesives when installing EcoScapes Wall Panels, for an secure hold that doesn't show on the face of the panel. The J-Roller makes it easier to get an even, well-distributed coating, for a good solid hold. After mounting, just run the roller over the panel's face with moderate pressure to maximize the adhesive's grip, and leave a flat, even finish.

Benefits

- Installs will be faster and less arduous
