The TelaScapes wall track system makes it simple to acoustically treat any commercial or residential space. It combines high level, effective sound absorption with options to personalize the look of the treatment.

The system is comprised of three fully customizable components: a modular track system that can be mounted almost anywhere, filler panels that provide broadband acoustic absorption, and a wide selection of durable stretch fabric in a variety of colour options.

**Step 1:**
Using the modular TelaScapes PVC track pieces, create the design and frame for the rest of the acoustic treatment. The tracks are compatible with almost any flat surface and are easy to mount.

**Step 2:**
Primacoustic filling material panels are easily mounted within the spaces created by the track system, a variety of panel sizes are available to reduce installation time for larger rooms, and mounting hardware makes it easy to affix the panels to any wall surface.

**Step 3:**
Finally, fabric is stretched over the panels, easily tucked into place with Primacoustic’s installation tools for a seamless fit. A wide variety of colour options are available to suit the existing décor of any space.
TelaScapes are the perfect solution for commercial or residential spaces that require a customized acoustic solution, including commercial offices, restaurants, home theatres, and Houses of Worship.

Infinitely modular and easy to install, TelaScapes allow the user to create treatment that's perfectly suited to its surroundings, providing excellent sound absorption without sacrificing aesthetics.

**Tracks**
The TelaScapes track system includes two types of track pieces: Perimeter tracks for outside edges and Mid-Wall tracks to join two sections of paneling together. Both of these track types are designed to accommodate heavy fabric types and to sit flush with Primacoustic's range of sound-absorbing filling material.

These durable tracks are built from recyclable PVC that can be cut to size to suit any space. Two colour options are provided for the track itself, with white or black finishes available.

**Fill Material:**
Choose between high performance glass wool or eco-friendly PET, depending on the use case and the desired amount of noise reduction. Both options will absorb a wide range of frequencies and help with issues in the room such as excessive noise and echo.

**Colour Options:**
Primacoustic has partnered with Guilford of Maine to provide to multiple colours of stretch fabric, letting the user keep aesthetics in mind while acoustically treating their space. A printable fabric option expands the range of design options even further allowing unique graphics and logos to be added.

**Finishing Tools:**
Primacoustic's range of custom tools make installing stretch fabric a breeze. The curved blades help the installer tuck the fabric into the edges of the track frame. No additional fixing materials are needed as the fabric is held in place by friction alone.
